Process Design Engineer

Glan Agua is an award-winning and innovative contractor providing project solutions for the water and wastewater industry including design, construction, commissioning, operation and maintenance.

With strategies in place to deliver our current backlog to an exceptional standard and further grow the business in Ireland. We are now recruiting a qualified Process Design Engineer to join our team.

Responsibilities and Duties:

- Assistance with the process design of water treatment plants at various project stages from feasibility to detailed design, contract document preparation, construction administration and commissioning
- Ensure thorough knowledge and understanding of project deliverables and contractual requirements.
- Report to and communicate with the Project Manager throughout project execution and take ownership of delegated task and duties.
- Support the Project Manager in the management and monitoring of project delivery within defined budget and program requirements.
- Preparation of designs
- Preparation of technical specifications and contract documents
- Report writing

Key Skills:

- Experience in the design and delivery of water treatment plants
- Knowledge of safety and health regulations with regard to the design process
- Ability to work within a team environment and under own initiative to achieve project goals
- Excellent English, both written and verbal.
- Strong communication skills.
- Attention to detail and ability to comply with Quality Assurance Management Systems is essential
- Enthusiastic, hardworking and flexible
- Chartered Engineer, desirable
